

STOP THE INVASION

**THIS IS WHAT
WE STAND TO LOSE!**

WHAT'S HAPPENING? Lionfish are invasive species from the Indo-Pacific that were introduced to the Atlantic through the aquarium trade. They consume vast quantities of more than 50 native fish and invertebrate species, some of which are economically and ecologically important.

WANT TO HELP? Support more research on lionfish and their impacts. Report lionfish sightings. Assist with lionfish removals. Eat them before they eat your lunch. Spread the word. Prevent the next marine invasion.

LET'S TAKE BACK OUR SEA!
