## Portrait of an Invasion

- Lionfish were introduced by hu local waters. The invasive lionfish become established in Atlantic ecos) - Invaders take advantage of an overfished sea. Over-harvest of Ic
predators that may eat lionfish, or c predators that may eat lionfish, or c
with lionfish for prey, may have set $t$ with liontish for prey, may
stage for proliferation.
- Lionfish are formidable. Their venomous spines and unique appearance may deter potentic predators and make them.
unrecognizable as prey.
- Lionfish reproduce quickly. Lionfish are able to breed yeardays, and mature at a young age. - Lionfish may out-compete
native predators. Native specie native predators. Native species,
such as snappers and groupers, such as snappers and groupers,
may not be able to compete with lionfish for food and habitat.
- Lionfish can decimate reefs. Wit their voracious appetites, lionfish ca
reduce populations of juvenile and reduce populations of juvenile and s
on coral reefs by up to 90 percent. indirectly affect corals by overconsur grazing parroffishes, which normall) algae from growing over corals.

Eggs, 15,000-30,000 per spawning even
Every 4 days year-round the female releases two mucousare fertilized by the male.

Larval stage, 20-40 days ess than 2 cm ( 0.8 in )

Approximately 36 hours later, the eggs hatch into larvae, which are dispersed by ocean currents.

Juvenile, up to 10 months $2-10 \mathrm{~cm}(0.8-4 \mathrm{in})$
Juveniles spend most of their time in one small area but can live in a wide range of

Reproductive adult, 1 year $10-20 \mathrm{~cm}(4-8 \mathrm{in})$

Although lionfish in their years, little is known about the lifespans of Atlantic invaders.

## Ioonfish Pterois volitans

The red lionfish is an invasive species native to the Indo-Pacific Ocean. Their human-caused introduction and subsequent population increase are now causing negative impacts on marine ecosystems in the southeastern seaboard of the U.S. and the Caribbean Sea. Lionfish are efficient predators invading a variety of natural and artificial habitats, competing with native predator fish and consuming smaller fishes, including the young of large species. A similar species, the devil firefish, Pterois miles, has also been observed in the Atlantic.

## Affected Areas

Observations of red lionfish have been recorded on coral patch reefs and deep reefs (up to 1000 feet deep or 305 meters), wrecks, mangroves, seawalls, docks, Bermuda to the western Gulf of Mexico and throughou the Caribbean Sea

What Do Lionfish Eat?
Lionfish are indiscriminate predators that will consume many prey small enough to fit in their mouth, including
the young of important fishery species such as grouper and snapper and ecologically important species such as parroffishes. Lionfish may impact fishery populations which may impact local economies.

The Venomous Spines Lionfish have two grooves on each spine. These grooves are filled with venom-producing tissue glands release a potent neurotoxin that travels the grooves into the wound. First aid for stings: Take a pain reliever and soak the wound in hot
water. Consult a physician as soon as possible.

How to Help Never release aquarium fish into the wild.
Report lionfish sightings to your local or national marine regulatory agency. Participate in lionfish tournaments to reduce local
lionfish populations Eat more lionfish. Th white flaky meat is white, flaky
delicious.
Wear thick gloves when Wear thick gloves when
handling to prevent injury handemous spines can be removed by carefully cutting with shears, making it easier to handle the fish safely.
